Ramón Folguera
FULL STACK DEVELOPER

I have always been interested in technology and software development. Although they are very different from architecture, which has been my profession for the past years, I believe I can utilize my expertise in planning, problem-solving, and developing projects from the foundations up to the finished small details.

At the moment I am doing a **Full Stack Developer** Bootcamp at **GeeksHubs** in Valencia. This is preparing us at a great speed to manage big amounts of work in a short time and simulate a work environment situation.

Digital Menu Restaurant   HTML + CSS / Bootstrap

GameBoy Colour with CSS   HTML + CSS / JavaScript

2016 - 2022
PRP architects l Londdon, UK

Architect

During the nine years that I lived in London, I worked for several different architecture firms.
In the last one, which I mention above, I worked for five years as a core member of the design team focused on high-quality residential and mixed-use schemes, involved in all aspects of initial concept, planning, and design development, delivering successful planning applications.
I have great experience working in a team, under pressure, and managing my time in the most effective way to deliver the highest quality in the time required.
